

MULTI PLUS GIVES YOU MORE FROM LESS

Getting an up-to-the minute story means being responsive and ready to go at any minute. Getting the story edited and broadcast from what could be some of the most hostile and remote places can be just as difficult. And the one thing that it all depends upon is a reliable power supply.

For BT & Sky News the Phoenix MultiPlus offers the perfect solution. An unremarkable package that delivers remarkable functionality, the inverter/battery charger is a complete power system in one compact package. In situations where space and weight are critical, such as a news gathering vehicle, the MultiPlus provides the means to downsize an on board generator by as much as 50% of what would otherwise be necessary. The Inverter is used to provide power at periods of peak demand and the rest of the time the unit is able to recharge batteries.

On vehicles leased to Sky news by BT the MultiPlus system allows sufficient power to support a news crew, full editing suite and satellite transmission equipment in a Mercedes Vito.

Phoenix MultiPlus and associated control gear installed on Sky News satellite News gathering vehicle.
