

Victron & BattleBorn

DRAFT

Compatible Victron products

All Multis, Quattros, Solar Chargers and other products that can be configured to the required charge parameters.

Note that there is no integration or communication, such as CANbus, between the BattleBorn battery and the Victron system. Such communication is not required; and also not available. The BattleBorn batteries are self-contained drop-in style batteries.

Configuration

Note that in all cases; the BattleBorn documentation is leading over below table. The purpose of the below table is to translate the BattleBorn terminology to Victron terminology.

Parameter	Setting	Remark
Charge curve	Fixed	
Absorption voltage	... V	
End absorption by tail current	Disable	This setting is available for Solar Chargers only
Float voltage	... V	
Storage	Disable	
Charge current		
Repeated absorption time		
Repeated absorption interval		
Max absorption time		Depends on the number of batteries in parallel. See BattleBorn documentation.
Low voltage disconnect	... V
