Using VNC to remotely access a CCGX

Nov 27th 2015: v1.30, now available as a release candidate, has a new feature called Remote Console. It uses VNC in the background and no longer requires manual configuration of the Gui run script. So now remotely controlling a Ccgx is possible for everybody! Even when the Ccgx is connected behind a firewall: since our VRM servers can tunnel the connection. See here for v1.30 change log: https://groups.google.com/forum/m/#!topic/victron-dev-venus/qsjHJ-Cn5u4
