

EasySolar-II GX

Introduction

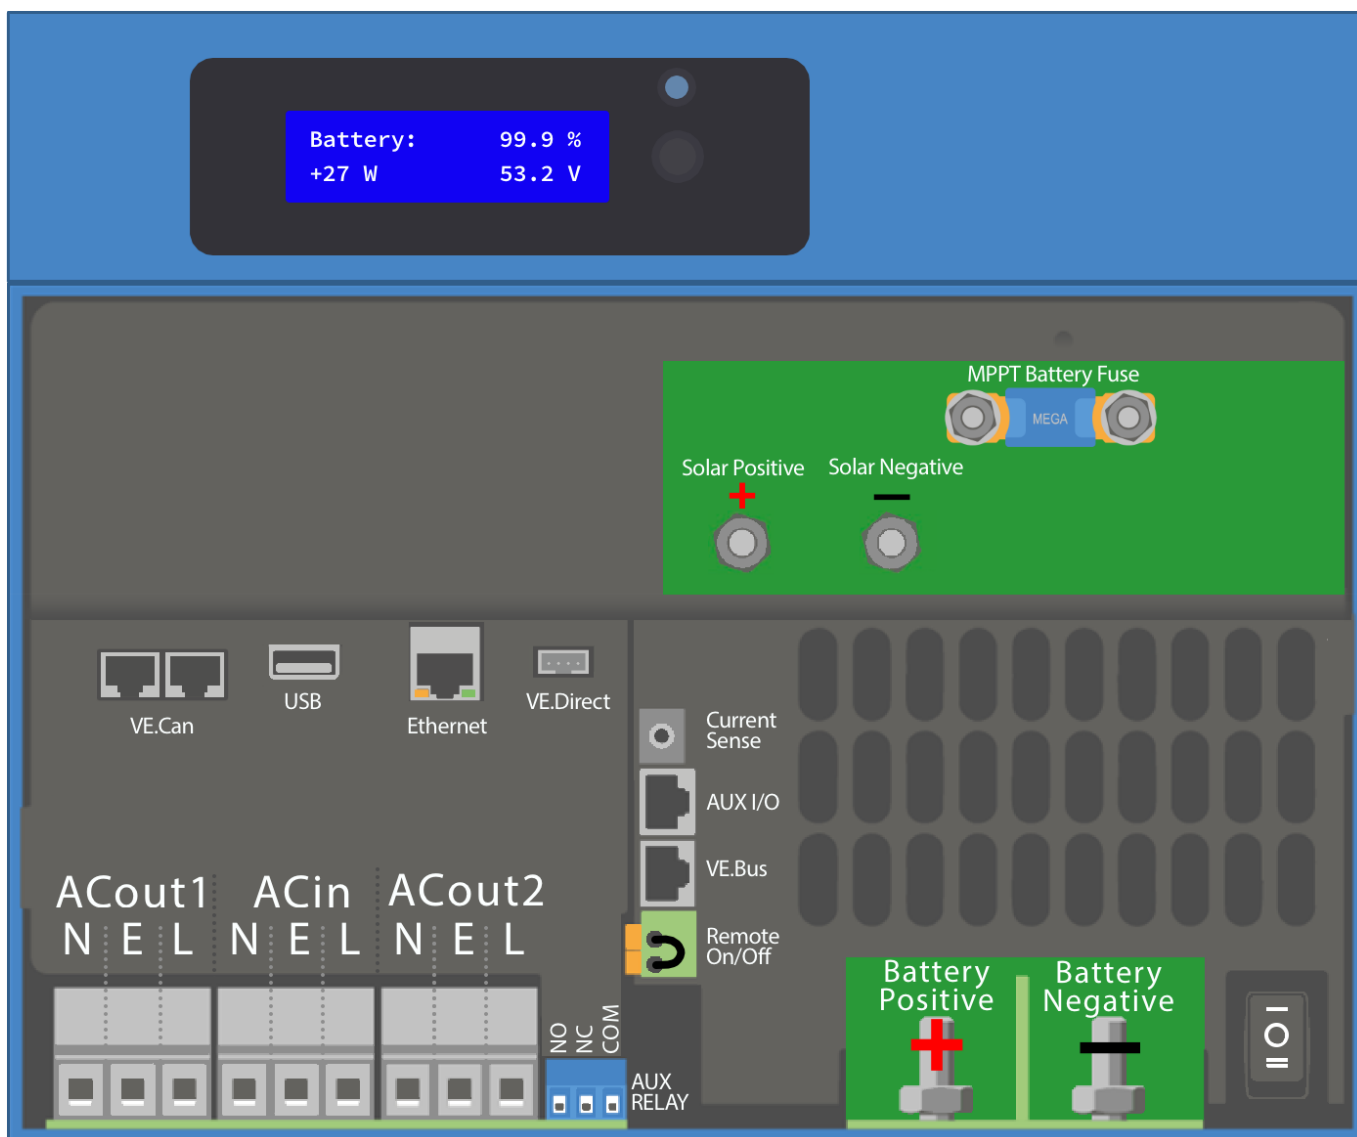

The Victron EasySolar-II GX integrates the following elements:

- 1. A powerful Multiplus inverter/charger,
- 2. A SmartSolar MPPT solar charge controller
- 3. A simplified GX display and interface.

These elements come prewired together inside a single unit. This greatly simplifies most installations, saving time and money.

The EasySolar-II still requires some knowledge and training in configuration.

The individual elements of this system also have their own respective documentation, and it should be referred to and understood before attempting installation.

Configuration

Example wiring diagrams

Intelligent (CANBus) Battery System

ESS System

Default

Connections

Solar

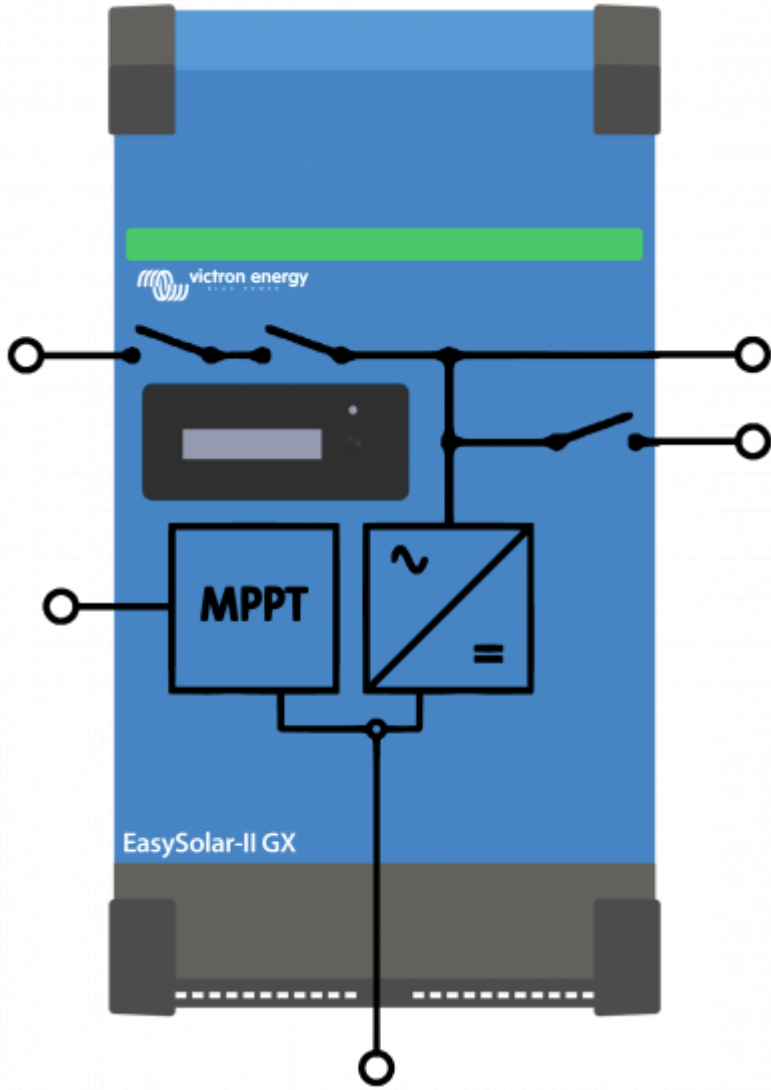

Integrated 250/70 SmartSolar MPPT. PV Solar connections up to 250 VOC made via M6 (?) lugs.

Wifi built in

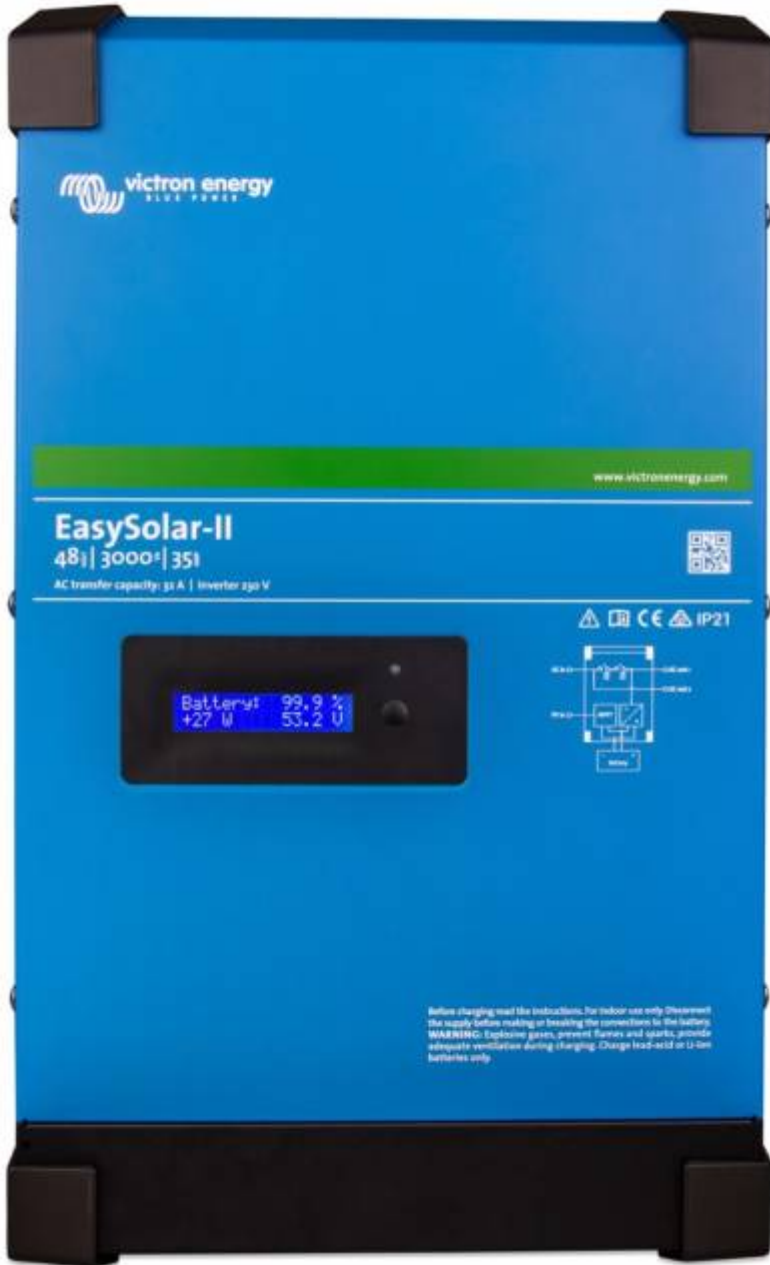

No Bluetooth on GX

Integrated 250/70 SmartSolar MPPT includes Bluetooth
