Publish my VRM site to everyone

We would like to have the possibility, to publish the PV values from the VRM portal to everyone. As a seller of PV systems, our potential customers would like to see real data, before they make a contract with us. At the moment I can add a VRM user, but then I must provide my potential customer with the user ID and the password. This brings up the risk, that a customer can change the password. And it's difficult to logon to the portal, every time you want to see a few values.

Showing other Victron users on map

It's a nice feature to see a map, where my PV system is located. Is it possible to show other VRM users around me on the map?

Selection for native language

The language of the VRM portal is English. In Germany we have a lot of customers, which want to see their system in their native language. We would like to have a localization selector box in the settings. If you need the German translation - no problem, I can do that.

Generated solar energy - enable presettings

The “Generated solar energy” value is the accumulation of the generated solar energy. On the second day of my new ECOmulti, I made a change with VEConfigure3. After the reboot of the ECOmulti the CCGX altered the value from a few kWh to 2,39 MWh. Now I have to live with the wrong value. Is there a possibility to change it? The best way for solving this problem would be to provide a field, where the value can be altered manually.
