Proposal VRM portal

— *Andreas Kriwanek 2014/10/26 18:42*— WORK IN PROGRESS

This proposal is for Victron employees only!

Using the VRM portal for my own ECOmulti, I detected some things which could be made in another way. I only want to give you a proposal for improving the portal. Overall ist's a fine portal, where I can find useful measurement values for my photovoltaic system.

Maybe you can make comments to every topic: is it useful, will it be made,...

Thank you

Andy

Publish my VRM site to everyone

We would like to have the possibility, to publish the PV values from the VRM portal to everyone. As a seller of PV systems, our potential customers would like to see real data, before they make a contract with us. At the moment I can add a VRM user, but then I must provide my potential customer with the user ID and the password. This brings up the risk, that a customer can change the password. And it's difficult to logon to the portal, every time you want to see a few values.

Showing other Victron users on map

It's a nice feature to see a map, where my PV system is located. Is it possible to show other VRM users around me on the map?

Selection for native language

The language of the VRM portal is English. In Germany we have a lot of customers, which want to see their system in their native language, because they speak no English. We would like to have a localization selector box in the settings. If you need the German translation - no problem, I can do that.

Generated solar energy - enable presettings

The “Generated solar energy” value is the accumulation of the generated solar energy. On the second day of my new ECOmulti, I made a change with VEConfigure3. After the reboot of the ECOmulti the CCGX altered the value from a few kWh to 2,39 MWh. Now I have to live with the wrong value. Is there

a possibility to change it? The best way for solving this problem would be to provide a field, where the value can be altered manually.

Wrong phase on "Advanced" tab

In the “Advanced” tab, the diagrams are for the three phases L1, L2 and L3. I have only a single phase system, which is electrically coupled to phase 2. It would be better, that a user have the possibility to select on which phase the system is located. Additionally it would be useful th hide the two unused tabs.

Missing DC power on "Advanced" tab

Short description of PV system

Solar users are proud of their system. They show the PV values to their friends. As an enhancement, it would be nice to add an description of the own system and include an image of the system.

Weather location is changing without altering the GPS coordinates

At the setup of my system in VRM portal I typed in the GPS coordinates of my town Bad AIbling. In the tab “Live feed” different nearby localtions are displayed, e.g. Tuntenhausen, Maxlrain.

Missing charging/discharging information on "Batteries" tab
