

# Setting up Victron Software Google Drive

## Disclaimer

Although publicly available, this information and/or mentioned software and firmware is for trained persons only. Victron Energy service and support channels are, unfortunately, not equipped to help untrained persons with such usage.

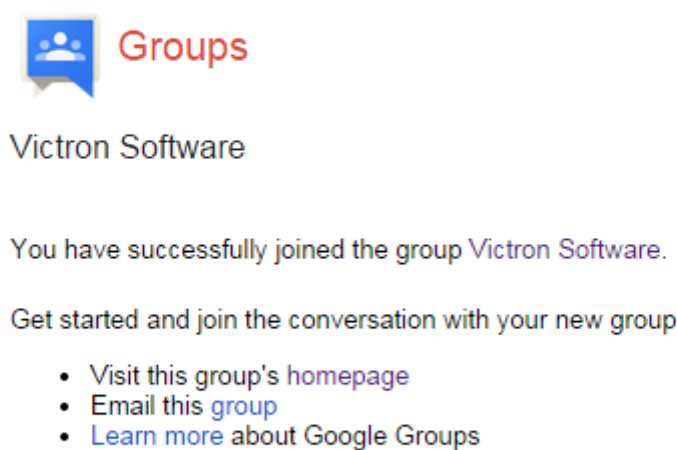

## Introduction

Always have all the latest Victron Energy firmware and software at your disposal! Even when on site and doing an installation, where no internet connection is available.

The 'Victron Software' Google Group is used to have its members add the Victron\_Software folder to their Google Drive. It contains the latest firmware files, and change logs, for all updateable Victron products.

## Get started

After receiving the invitation email, press 'Accept this invitation'. It will take you to this page:

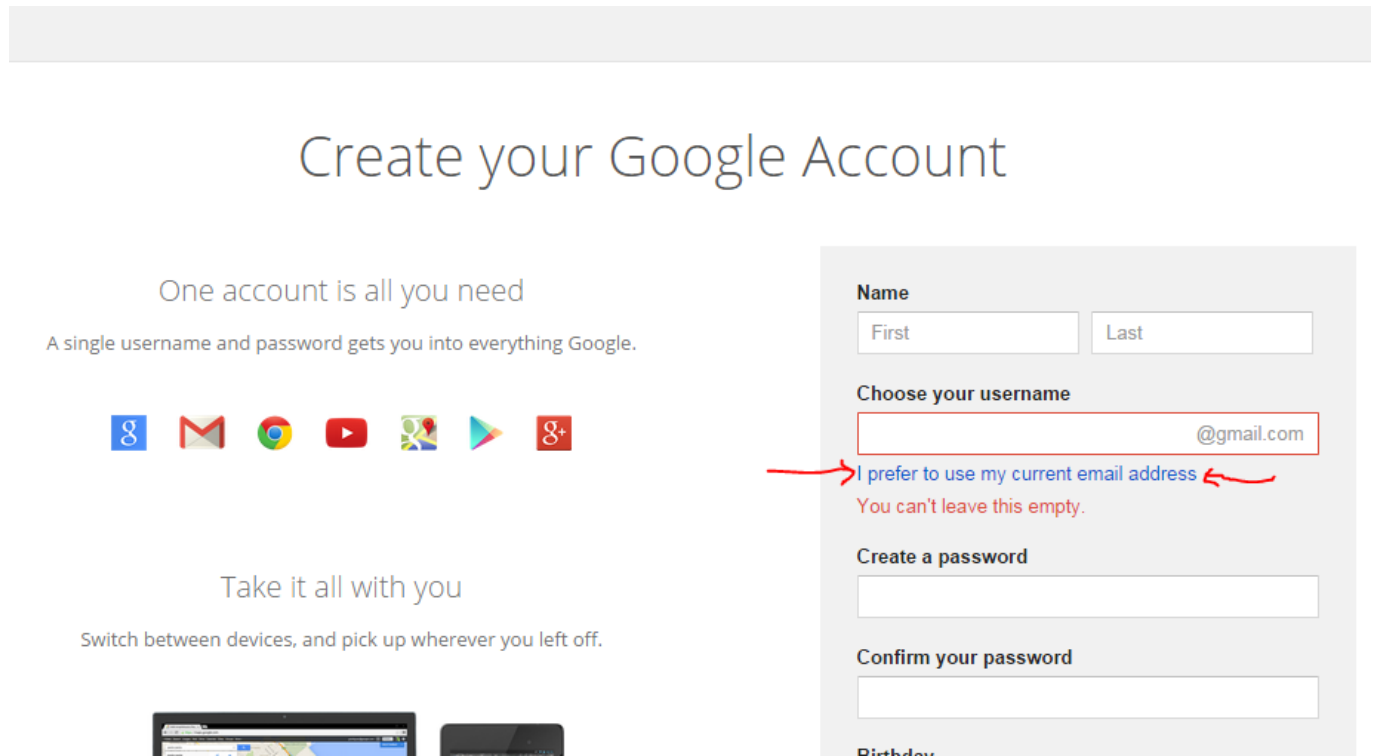

The image shows the Google Groups page for the "Victron Software" group. At the top, there is a blue speech bubble icon with a person silhouette and the word "Groups" in red. Below this, the group name "Victron Software" is displayed. A message states: "You have successfully joined the group Victron Software." Below this, there is a heading "Get started and join the conversation with your new group" followed by a bulleted list of links: "Visit this group's homepage", "Email this group", and "Learn more about Google Groups".

Or if you have not received an invitation email, [go to the group](#), and Apply for a membership.

## Step 1. Create a Google account

Already have a Google Account? [Skip this step.](#)

Open this link in your browser: <https://accounts.google.com/SignUp>. It will take you to this page:

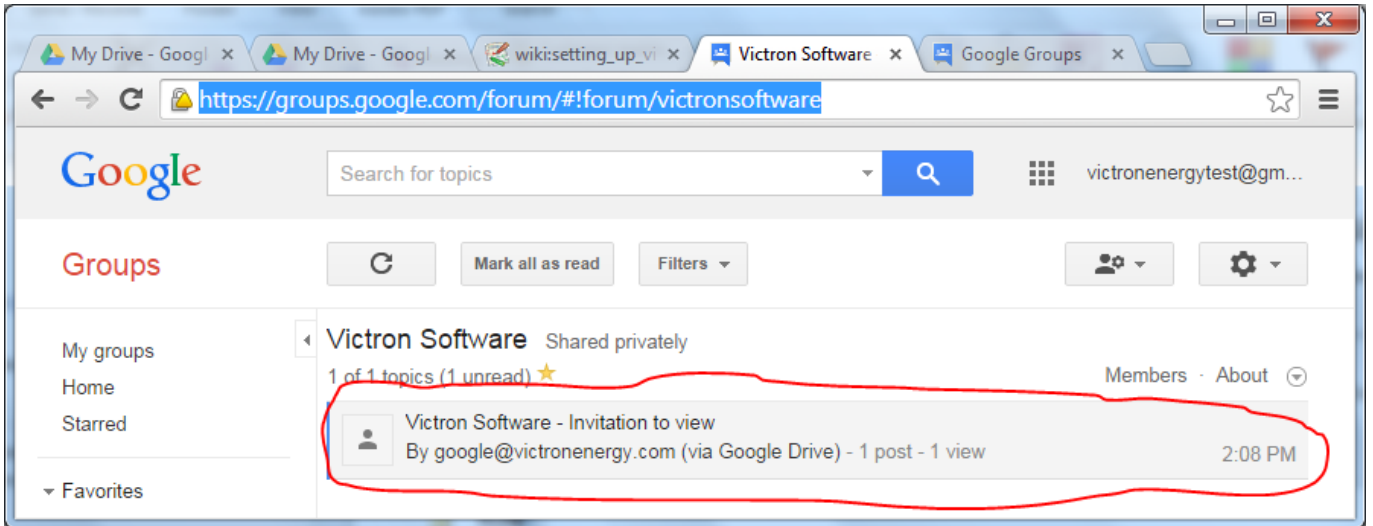

Note: if you do not want to end up with an extra email box, click the link 'I prefer to use my current email address'. Make sure to use the same email address as that which you received the invitation from. If you have another email address, which is already a Google Account, subscribe to the group using that email address here: <https://groups.google.com/d/forum/victronsoftware>.

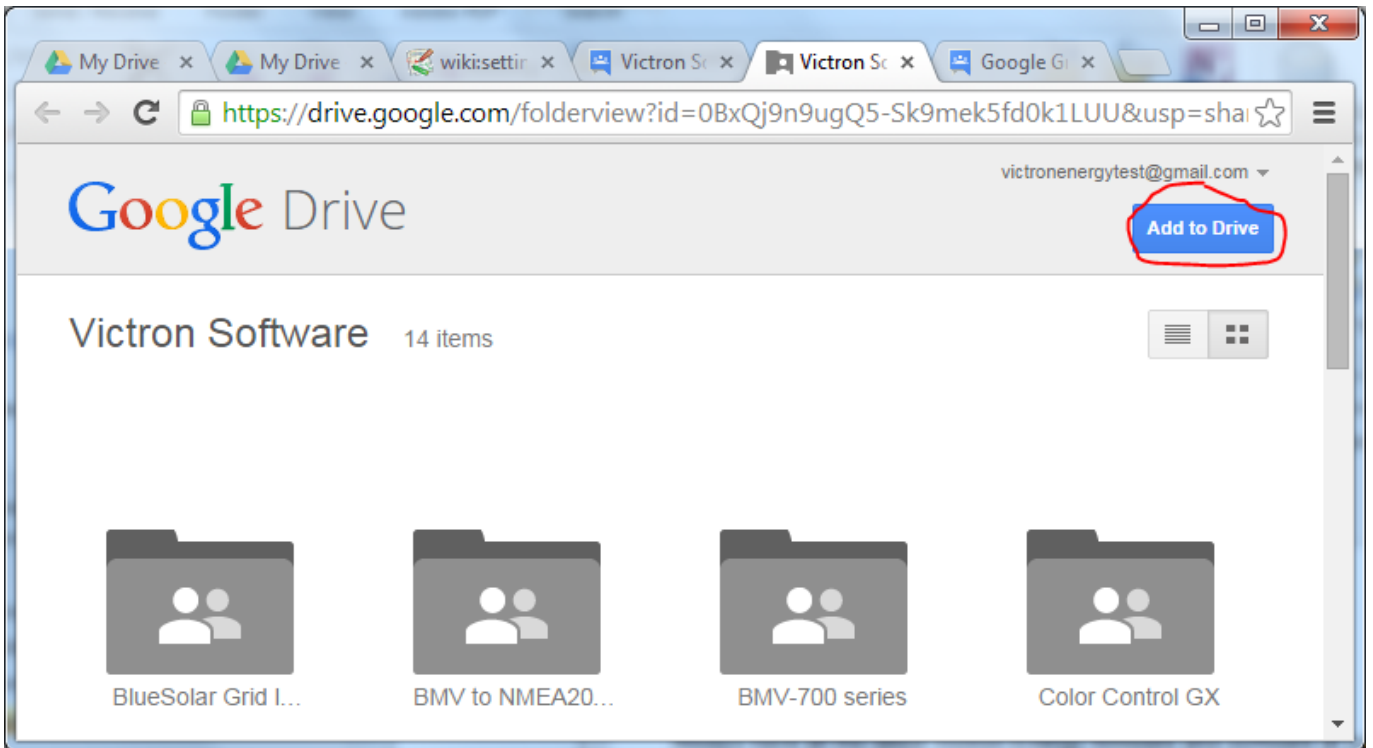

Otherwise, follow the instructions to create the Google Account.

## Step 2. Open the Victron Software shared folder

Go to <https://groups.google.com/d/forum/victronsoftware>, and look for the message called 'Victron Software - invitation to view':

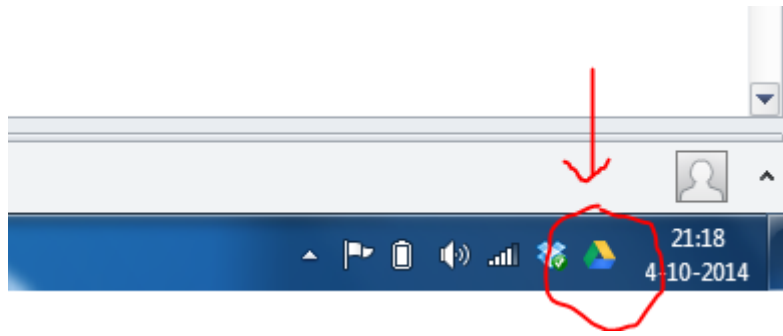

Open that post and the link in it, and then click 'Add to drive' at the top left:

Now, open your Google drive: <https://drive.google.com>. You have now access to all the latest firmware files and their change logs. But that is not all, the next steps install the Google Drive sync tool on your computer, which will make sure you always carry the latest files with you.

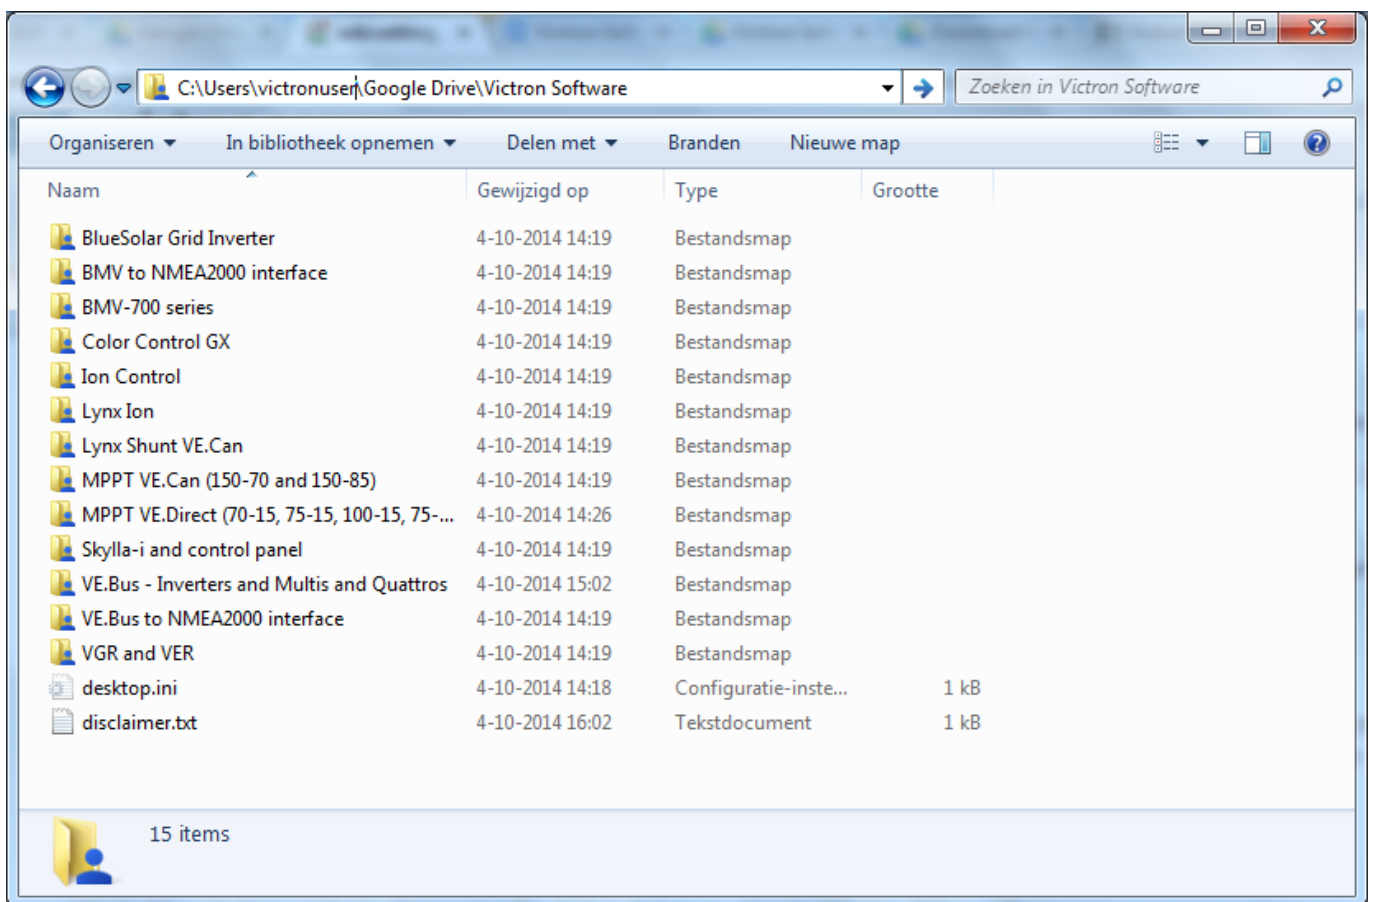

### Step 3. Install the Google Drive software to your computer

Go to the download page of [Google Drive](#), and follow the instructions. After setting up the Google Drive software on your computer, you'll see this icon on the right hand side at the bottom of your screen:

Click it and then select 'Open Google drive folder', to go to the files. These are on your computer: you can also access them when not connected to the internet. Make sure to regularly connect your computer to the internet, to ensure all the latest files are downloaded and current.

The folder on the computer:

~~DISQUS~~
