2024-05-05 16:57 1/3 Victron GX product range

GX product family

Introduction

These GX products are the Victron top of the line monitoring solution. It consists of different Venusdevices; each suitable for their own best type of system. Besides that there are accessories which can be used to extend the functionality.

The Venus-device is the heart of the monitoring system, being the communication-centre of your installation. All other systems components, such as inverter/chargers, solar chargers, and batteries connects to it. And then the Venus-devices ensures they are working in harmony. Monitoring can be done locally; as well as remotely via our free-to-use Victron Remote Management Portal (VRM). Also the system allows for Remote firmware updates and Remotely changing the settings.

The Venus devices are:

- Color Control GX
- Venus GX
- Octo GX The Octo GX is the best fit for installations that have many MPPT Solar Chargers, as it has 10 VE.Direct ports
- CANvu GX The CANvu GX is best used when IP67 rating is a must.

Available accessories

- GX GSM A cellular modem, connects to Venus-device via USB and takes a simcard
- WiFi USB sticks
- Energy Meters Measures PV Inverter Output for types of PV Inverters that cannot be read-out directly. And used as a grid meter in an Energy Storage System (ESS).
- VE.Can resistive tank sender adapter The VE.Can resistive tank sender adapter allows a standard resistive tank level sender to connect to the Venus-device.

Comparison table

<u>User interface</u>	CCGX	Venus GX	Octo GX	CANvu GX

Notes:

- 1. The maximum number of VE.Direct devices: on a CCGX is 5 (2 normal and 3 via USB). On a Venus GX is 6 (2 normal and 4 via USB). On a Octo GX is 10 (10 normal, no USB). VE.Direct ports on a Venus-device are isolated.
- 2. Though the CCGX has no built-in WiFi it can easily be added by attaching a USB-WiFi dongle. See CCGX Manual, section 1.4.2 for details.
- 3. The built-in WiFi in the Venus GX has a very low signal strength unfortunately. The strength is sufficient for connecting to a phone, tablet or laptop in order to access setup and monitoring. But to connect the Venus GX to the internet either use the built-in Ethernet port or add a USB-WiFi dongle. See CCGX Manual, section 1.4.2 for details. Make sure the Venus GX is running v2.06 or later the first shipment of Venus GX units ran v2.05.
- 4. Though the hardware of the Venus GX and Octo GX have a Bluetooth Smart chipset inside; it doesn't work properly and they are unfixable. Bluetooth Smart for Venus-devices is coming but not using those built-in chipsets.

2024-05-05 16:57 3/3 Victron GX product range

5. Larger SD memory cards (SDXC) are not supported. SD cards can be used for two purposes:

- 1. Logging data, see this section in the ccgx manual for details.
- 2. Updating firmware, see this section in the ccgx manual for detials.
- 6. The second CANbus port is accessible via the GND, CAN-H and CAN-L terminals. Note that the port is not Isolated. See Settings → Services for configuring that port.
- 7. The programmable relay can be set to act as an alarm relay, automatic genset start stop, or an on/off switch, and is controlled via the GUI and/or ModbusTCP.
- 8. In the Venus GX hardware there are two relays at present only one of them is available for use.
- 9. The tank level inputs are resistive and should be connected to a resistive tank sender. Victron does not supply tank senders. The tank level ports can each be configured to work with either European (0 180 Ohm); or US tank senders (240 30 Ohm).
- 10. The Venus GX has two temperature terminals which can be used to measure & monitor all kinds of temperature-inputs. Temperature senders are not included. The required sensor is ASS000001000 Temperature Sensor QUA/PMP/Venus GX. (Note that this is <u>not</u> the same as the BMV temperature accessory.)
- 11. Octo GX comes with a small Wifi antenna. It is possible to replace it by any other Wifi antenna having a RP-SMA connector.
