# **Two-step verification**

Protect your account against unauthorized access with two-step verification. two-step verification adds an extra layer of protection to your account by requiring you to enter both your password and a security code, which is sent to your mobile phone, when logging into your VRM installation.

This manual describes how two-step authentication can be switched on or off for your VRM account. The different steps are described in order of execution and shown below using multiple screenshots.

# How to turn on two-step verification

### Step one

Log into your account at https://vrm.victronenergy.com/user/login

Once logged in, you will be redirected to your VRM homepage, shown in the image below. On this page select 'Profile' on the left as shown in the example image below, where 'Profile' is marked with a red box.

Two-step verification adds an extra layer of protection to your account by requiring you to enter both your password and a security code recieved on your mobile phone when logging in to VRM. For your convenience you can upon login specify to never ask for a security code on the current device again. From that point on you only need to enter your password when accessing the VRM website from that device.							
් Log out	Learn more Two-step verification status ON Next							

## **Step four**

Now choose your country and then enter your mobile phone number. Submit this information by pressing 'Next'. The VRM system will then send a verification code to your phone via a text message (SMS).

# How to Turn off two-step verification

If you would like to turn off two-step verification you can do so by returning to your profile and once again access '2-step verification'. This time flick the switch to 'Off'. You will then have to confirm your

action by entering your password and pressing 'Next'. The VRM system will notify you of successfully disabling two-step verification.
