

Victron to be supplier to X-Yachts

X-Yachts - the yard in Haderslev, Denmark.

X-Yachts - Xc 45

Victron will become the in-house supplier to a new, futuristic, range of X-Yachts. The Xc 45 is the first in an entirely new and exclusive series of cruising yachts. The Xc 45 yachts, together with the other yachts in the series, will have the highest quality sailing performance with the accent on comfortable cruising and long-distance sailing.

X-Yachts chose Victron to be its supplier of on-board electrical power systems. The Xc 45 will be the first to be provided with the on-board system. It will be launched during the Gold Cup in July.

To enable comfortable cruising in coastal waters the hulls will have a deep V-section near the keel, resulting in a comfortable sailing behaviour whether sailing close-hauled or motoring on the engine. Further comfort when sailing is achieved by a retractable bowthruster, a triple-blade collapsible propeller and electric winches.

The yachts will also be kitted out with large tanks, watermakers, extensive multimedia and excellent kitchen facilities. To provide power to the electrical equipment, X-Yachts chose to bring Victron on board. Victron will supply the electrical installation, as well as the control system and inverters.
