**BIDIRECTIONAL CONVERTER**

- **Gridsurt function**: In case of overload the ECOmulti will import power from the grid to prevent system shutdown.
- **Maximum AC current feed-through**: 50 A
- **AC voltage**: 230 V 50 Hz single phase
- **Cont. output power at 25 °C**: 3000 VA
- **Cont. output power at 25 °C**: 2900 W
- **Peak power**: 6000 W
- **Maximum efficiency**: 94%
- **Power factor range (when connected to the grid)**: 0,7 inductive to 0,7 capacitive (programmable)
- **Zero-load power (W)**: 15 W
- **Zero-load power in AES mode**: 10 W
- **AC current feed-through**: 50 A
- **AC voltage**: 230 V 50 Hz single phase
- **Cont. output power at 25 °C**: 3000 VA
- **Cont. output power at 25 °C**: 2900 W
- **Peak power**: 6000 W
- **Maximum efficiency**: 94%
- **Power factor range (when connected to the grid)**: 0,7 inductive to 0,7 capacitive (programmable)
- **Zero-load power (W)**: 15 W
- **Zero-load power in AES mode**: 10 W
- **Charge voltage ‘absorption’**: 28,3 V
- **Charge voltage ‘float’**: 26,7 V
- **Maximum charge current**: 70 A
- **Maximum battery depth of discharge (DoD)**: 80%
- **Auxiliary output**: To connect additional loads once the battery has been fully charged: 16 A relay
- **Programmable relay**: For monitoring, alarm or other purposes
- **VE.Bus communication port**: For parallel and three phase operation, remote monitoring, remote control and system integration
- **General purpose communication port**: Yes
- **Remote on-off**: Yes

**BATTERY**

- **Technology**: Lithium Iron Phosphate
- **Nominal voltage**: 25,6 V
- **Nominal energy at 25°C**: 2,4 kWh
- **Nominal capacity at 25°C**: 90 Ah
- **Nominal capacity at 0°C**: 72 Ah
- **Nominal capacity at -20°C**: 45 Ah
- **Battery Management System**: Cell balancing, and system shutdown in case of cell over voltage, cell under voltage and over temperature
- **Cycle life, 80% DoD**: 2000 cycles
- **Cycle life, 70% DoD**: 3000 cycles
- **Cycle life, 50% DoD**: 5000 cycles
- **Max storage time at 25 °C**: 1 year

**OTHER**

- **Display**: Graphical display
- **Data storage and graphical display on vrm.victronenergy.com**
- **Graphical User Interface (GUI)**
- **Ethernet (standard) and Wi/fi (optional) for remote monitoring and control**
- **Data storage and graphical display on vrm.victronenergy.com**
- **Android and iPhone apps**
- **Operating temperature**: -20 to + 40°C
- **Storage temperature**: -40 to + 50°C
- **Protection category**: IP22
- **Humidity**: 95% non condensing

**ENCLOSURE**

- **Colour**: Blue RAL 5012
- **Weight**: Without battery: 28 kg With battery: 60 kg
- **Dimensions (boxed)**: 475 x 575 x 360 mm

**STANDARDS**

- **Safety**: EN-60335-1, EN-60335-2-29, VDE-AR-N 4105
- **Emission, Immunity**: EN55014-1, EN 55014-2, EN 61000-3-2
- **Protection category**: IP22
- **Battery Management System**: Cell balancing, and system shutdown in case of cell over voltage, cell under voltage and over temperature
- **Cycle life, 80% DoD**: 2000 cycles
- **Cycle life, 70% DoD**: 3000 cycles
- **Cycle life, 50% DoD**: 5000 cycles
- **Max storage time at 25 °C**: 1 year

ECOmulti
A simple wall mounted energy storage solution

Why 2.3 kWh?
Whenever PV output exceeds consumption, storing excess output for later use will increase self-consumption.
However:
- PV harvest will fluctuate from season to season, from day to day and also within the day.
- Electricity consumption is likewise fluctuating: working days, weekends and holiday periods all result in different consumption patterns.
A 2.3 kWh Li-ion battery is an efficient solution for a two person energy conscious household.
Energy consumption from dusk to dawn will be 2 kWh or more, even when no energy hungry appliances like a dishwasher or clothes dryer are used. A fully charged 2.3 kWh battery will therefore be discharged before the sun starts shining again.
The average household with two children would fully utilize a 4.6 kWh Li-ion battery; one additional battery module.

Increasing storage capacity
More battery storage capacity will reduce feedback into the grid and increase self sufficiency, especially during the summer season.
To increase self sufficiency during wintertime both the battery and the PV array have to be enlarged.

Sizing the PV array
Sufficient energy must be harvested to recharge the battery and to power the home, even on a reasonably clear winter day.
At roughly 50 degrees latitude (Seattle, London, Amsterdam, Berlin, Munich) the two person energy conscious household will need a 2.5 kWp array.
A four person household would need a 5 kWp array.
At roughly 30 to 40 degrees latitude (Los Angeles, Marseille, Sevilla) a 1 kWp resp. 2 kWp array will do.
A larger PV array will increase feedback into the grid, but not substantially increase battery utilization and self sufficiency.

The ECOmulti can be wall mounted, is easy to install, easy to program and easy to operate.

Extremely flexible
- Energy storage can be increased by adding battery modules.
- AC power can be increased by paralleling ECOmulti modules.
- Three ECOmulti modules can be configured for three phase operation.

More self-consumption, more independence
With 2.3 kWh Li-ion storage capacity and a 3 kVA bidirectional inverter, the ECOmulti reduces dependence on power from the grid.
The growing interest in self-consumption is driven by increasing retail electricity prices and simultaneously decreasing feed in tariffs. Feed in tariffs are decreasing a.o. because it becomes increasingly difficult, and expensive, to ensure stability of the grid as more solar and wind power comes on line. Simultaneously, the retail price of electricity is increasing, to cover these same costs plus the cost to keep conventional power plants in hot standby to back-up renewable power generation in case the sun is not shining and/or the wind is not blowing.

The ECOmulti meets the German interconnection standard VDE-AR-N 4105 and the Incentive Program for Solar Energy Storage Systems Marktanreizprogramm für Batteriespeicher.

With Intelligent Battery and Load Management the ECOmulti can limit power export to the grid to at most 60% of the installed Wp capacity; KfW-Programm Erneuerbare Energien "Speicher".
According to the Fraunhofer-Institut für Solare Energiesysteme (ISE), a household that consumes 4500 kWh per year can reduce energy import from the grid by 60% when installing a 5 kWp solar array combined with 4 kWh usable energy storage.
For more information please download our white paper Self-consumption or grid independence from www.victronenergy.com.

Solar yield

Two person energy conscious household
| Consumption: | 2500 kWh per year | 4500 kWh per year |
| PV array: | 2.5 kWp | 5 kW |
| Battery: | 2.3 kWh Li-ion | 4.6 kWh Li-ion |
