

Victron Energy at Birmingham CV show 2006

The Commercial Vehicle Show is Britain's largest transport and logistics event. The show attracts a vast number of people from all areas of the industry. Fleet engineers, transport, fleet or logistics managers, owners, MDs and other senior management from every sector of the UK road transport business.

Merlin Equipment, Victron Energy distributor for the CV market in the UK, presented the Victron product range to the public: chargers, inverters, inverter-charger combinations, gel and AGM batteries, alternators and the new Victron Energy monitoring and control network solution: VE.Net.

VE.Net offers a new way of communicating between and connecting electrical devices resulting in less cabling, less weight and a faster and lower cost installation. The system provides information about all connected devices, system status and power distribution, which can be accessed through a panel or remotely through a secured website. Moreover, VE.Net offers the possibility of remote control and monitoring as well as float management through GSM/ GPS technology.

Danny Jones, Victron Energy sales manager for the UK speaks of an extremely successful show. *'We were pleased with the number of visitors and the interest the booth attracted. We received a lot of positive comments on the product demonstrations given in the Victron Energy van. It is clear that the capabilities of our products are registering well with the market. We made contact with a good number of potential new trade customers, so I am very happy with the results of the show.'*
