

POWER BOARD

This “Power Board” was designed and built by Mick Abraham of abrahamsolar.com for a missionary health clinic in Africa. In addition to Victron equipment, this features Mick’s own switchgear product, the MegaBox™.

Mick says: “I’ve worked with all brands of power electronics, and I like Victron gear best of all. With other high end inverters, I get many phone calls from confused customers; Victron inverters and Multi’s are much more user friendly. The matching chargers and extensive Victron line allow for much more flexibility in the systems I build. Best of all, Victron battery charge circuits really deliver the power they promise—what a novel idea!”
