

SEAMLESS POWER SOLUTIONS FOR SUNSEEKER

Owning a luxury yacht is all about relaxation and comfort. What you certainly don't want is the aggravation associated with re-setting everything each time power is transferred from ship to shore.

Sunseeker International, UK's leading production motor yacht builder, uses Multi plus both as a power source and UPS (uninterruptible power supply) on the 82-94ft yacht model range. For quiet running periods at anchor the inverter supplies power for entertainment and refrigeration and the UPS function ensures there is no power loss to essential on board systems when transferring power from generator to shore side supply. And when mains power is available the unit provides optimized battery charging.

Any overload of the mains or generator will thus be prevented by using the additional power from the batteries. The UPS functionality allows a seamless and automatic transfer of power from mains to inverter supply.
