1. Introduction

The VE.Direct Bluetooth Smart dongle allows non-Bluetooth VE.Direct Victron product to be accessed via Bluetooth, for monitoring, changing make settings and update firmware purposes, using the VictronConnect App.

The dongle is able to read data from any product that has a VE.Direct port and is especially useful for products that do not have built-in Bluetooth, such as the BMV 700 battery monitor, Phoenix Inverter VE.Direct or BlueSolar MPPT Solar Charge Controllers.

For additional documentation relating to the dongle, like product photos, certificates and more, also see the VE.Direct to Bluetooth Smart dongle product page.

The dongle has two indication LEDs, a push button and a VE.Direct connector as indicated in below image.

- Bluetooth LED
- Error LED
- Clear PIN code button
- VE.Direct connector

1.1. Compatible products

The dongle can be connected to almost all Victron products that have a built-in VE.Direct port.

For a full list see the "Compatible Victron Products" section of the VictronConnect manual.

1.2. The VictronConnect App

To connect to the Victron product via the dongle:

- Open the VictronConnect App.
- The Victron app will establish communication with the dongle and the Victron product.
- When the connection is active, the blue Bluetooth LED will stop blinking and turn on solid.
- The product where the dongle is connected to will show up in the device list of the VictronConnect App.
- It will be called VE.Direct smart, together with the name of the connected Victron product. The name can be changed if desired.
• Select “VE.Direct smart” from the VictronConnect App device list.
• The Victron product can now be accessed via the dongle and VictronConnect App.
• Use the VictronConnect App to monitor, make settings or update firmware of the Victron product.

For more information on monitoring and product settings, see the VictronConnect product page and also see the product manual of the Victron product the dongle is connected to.

**Example of VictronConnect device list and the product page of an inverter**

**To access the dongle information via the VictronConnect App:**

• Click on the cog symbol in the top right of the product screen to go to the settings page.
• Click on the 3 dots symbol in the top right hand corner of the settings screen.
• Select “Product info” from the pop-up window, the product page will open.
• Scroll down on the product info page to see the dongle information.
2. Installation

- Connect the dongle directly to the VE.Direct port of a compatible Victron product.
- Ensure that the compatible Victron product has been powered up so that the dongle is also powered.
- On power-up, the blue LED will blink, and the red LED will quickly flash. The red LED will give a short flash to confirm that the red LED is functional.
- Connect to the dongle using the VictronConnect App.
- If a firmware update is required, the blue and red LED will blink fast in an alternating fashion. The VictronConnect App will automatically update the firmware.
- If a firmware update is not required, the blue LED will slowly blink and the red LED is off.
- Once the VictronConnect App has established a successfully connection with the dongle (and the firmware was successfully updated), the blue LED will be on and the red LED will be off.
- Quite often, the firmware of the connected Victron product will also be updated on first connection.

It is not possible to extend the 1.5m VE.Direct cable.
3. Operation

As soon as the Victron product where the dongle is connected to, is powered up, the dongle will also be powered. The blue Bluetooth LED will be slowly blinking. This means that the dongle is ready for connection.

3.1. LED Status codes Bluetooth module

The Bluetooth status LED (blue) and an the error LED are both associated with the Bluetooth interface.

- On power-up, the blue LED will blink, and the red LED will quickly flash. The red LED will give a short flash to confirm that the red LED is functional.
- When the blue LED is blinking, the Bluetooth interface is ready to be connected to the VictronConnect App.
- When the blue LED stays on, the Bluetooth interface has successfully connected to VictronConnect App via Bluetooth.

See below table for an overview of all possible LED combinations of the Bluetooth module and their meaning.

3.2. Update firmware

If the blue and red LED are blinking alternating fast this means that the dongle firmware needs to be updated. This usually occurs during installation when the dongle is powered up for the first time.

To update the firmware on first install:

- Connect to the dongle with VictronConnect.
- Once connected VictronConnect will automatically initiate the firmware update.
To check the firmware version or to manually update:

- Go to the product info screen as described in previous chapter
- Check the firmware version
- If the latest version is installed, no action is needed
- If there is a newer version available, use the "UPDATE" link to update to the latest version
4. Troubleshooting and Support

Consult this chapter in case of unexpected behaviour or if you suspect a product fault.

The correct troubleshooting and support process is to first consult the common issues as described in this chapter.

Should this fail to resolve the issue contact the point of purchase for technical support. If the point of purchase is unknown, refer to the Victron Energy Support webpage.

4.1. Unable to connect to the dongle

How to fix or diagnose connection problems:

• Make sure that the Victron product where the dongle is connected to, is listed in the "compatible Victron products" chapter in the VictronConnect manual.
• The dongle is powered via the VE.Direct cable connection. Check that the device where the dongle connects to, is powered and the LEDs blink when connecting to the VE.Direct port.
• Make sure you are close enough to the dongle. In open space, a distance of up to approximately 20 meters should work.
• Only one phone or tablet can be connected to a dongle at the same time. Make sure no other devices are connected to the dongle, and try again.
• Try to disconnect the dongle and reconnect it to the same product.
• Try to connect the dongle to a different product (if available).
• Check if VictronConnect can see the device when using a VE.Direct USB cable connected to a PC or android phone.
• Try re-pairing by first removing the pairing from the phone: go to your phone's Settings, then click Bluetooth. Click the (i)-icon next to any "VE.Direct LE" device and click "Forget This Device". Then, open the VictronConnect App again and pull down the Discovery screen to rediscover products. Set the dongle in pairing mode by clicking the button on the dongle, then click the Victron product in the app's Discovery screen. Confirm the pairing and you should now be connected to the dongle.
• In case a Motorola Moto G 2014 (aka Moto G2) is used: This model has a known issue with VE.Direct Bluetooth Smart dongles with serial number HQ1606 and earlier. If you have such serial number dongle and that phone, contact your Victron supplier for a replacement (newer) dongle.

If these steps were unsuccessful see the troubleshooting section in the VictronConnect manual for more troubleshooting information.
5. Warranty

This product has a 5-year limited warranty. This limited warranty covers defects in materials and workmanship in this product and lasts for three years from the date of original purchase of this product. To claim warranty the customer must return the product together with the receipt of purchase to the point of purchase. This limited warranty does not cover damage, deterioration or malfunction resulting from alteration, modification, improper or unreasonable use or misuse, neglect, exposure to excess moisture, fire, improper packing, lightning, power surges, or other acts of nature. This limited warranty does not cover damage, deterioration or malfunction resulting from repairs attempted by anyone unauthorized by Victron Energy to make such repairs. Non-compliance with the instructions in this manual will render the warranty void. Victron Energy is not liable for any consequential damages arising from the use of this product. The maximum liability of Victron Energy under this limited warranty shall not exceed the actual purchase price of the product.
